

## CS2006 Haskell 2 Practical Individual Report

For this practical I did a fair amount. Me and one team mate did a lot of pair programming for a few of the main requirements and a few advanced requirements. I added cabal functionality and also did a majority of the testing. Our other team mate also helped with pair programming but mainly worked on Python while they were ill with COVID. I have also caught COVID at the time of writing this and it has impacted our work speed quite significantly, so I do hope this is taken into consideration when marking as we were not given an extension due to the fact it is a group project. Still I am proud of the work we've done and I've made a fair contribution to the project.
